

LEAVES

about

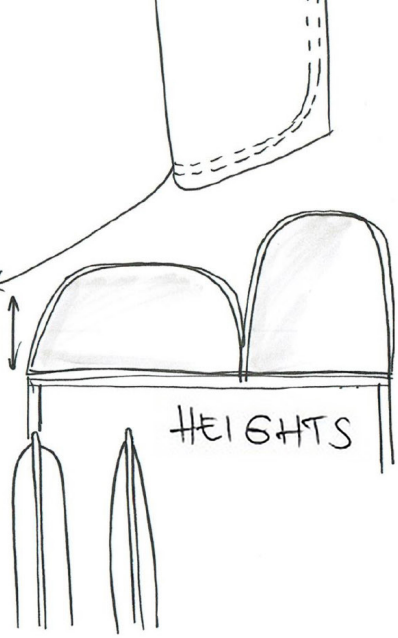

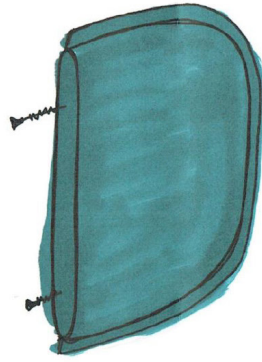

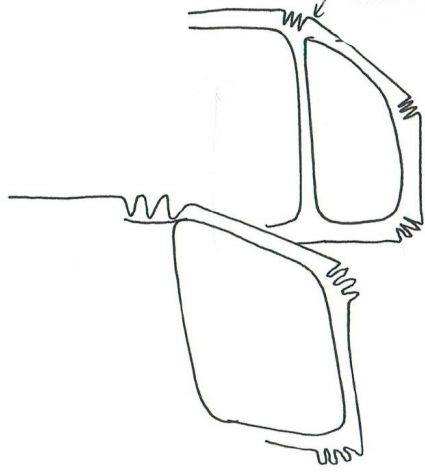

We are Acustio. We design and manufacture acoustic furniture solutions for the modern office.

Our sound-absorbing panels are work-friendly by design. Just imagine how comfortable work will become with our desk dividers, wall panels, free-standing room dividers and phone booths, to name just a few.

Acustio's flexible and functional solutions mean a shared office space can retain intimacy and a productive peace and quiet. It becomes surprisingly free from unwanted distractions, such as conversations, phones or noisy printers.

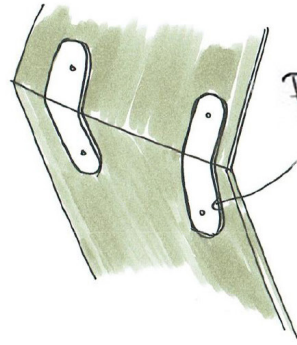

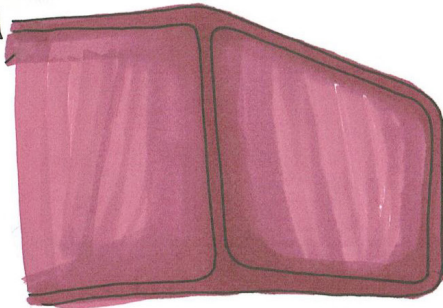

Our values are simple. All Acustio products are handmade with love and crafted to perfection, and attention to detail is what we do take pride in.

HOLDING

SAME FORM

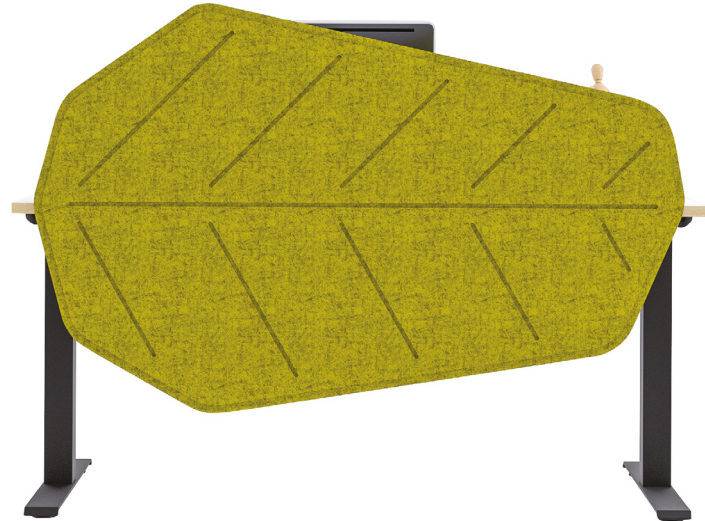

A family of beautifully designed panels, they are the only leaf-shaped acoustic products on the market. Leaves look great and work perfectly on regular and glass walls, ceilings, desks and floors.

The panels can be embossed on one or both sides and the choice of synthetic or natural wool felts is amazing by design.

LEAVES DESKTOP

The office is bound to feel greener with Acustio's leaf shapes, regardless of the felt colour chosen! The screens can be embossed on one or both sides, and user experience is second to none with a choice of sizes and a myriad colours to select from.

Our behind-the-desk privacy screens feature full-size and half-size versions that meet the needs of every office. And with Acustio's wide range of adapters, the panels can be mounted easily on desks from the world's leading manufacturers.

LEAVES ROOM DIVIDERS

Friendly and cosy by design, Leaves grow on users in all types of interiors. The floor is always theirs, the shape adds an air of light-hearted coziness, and the sound absorption is unheard of.

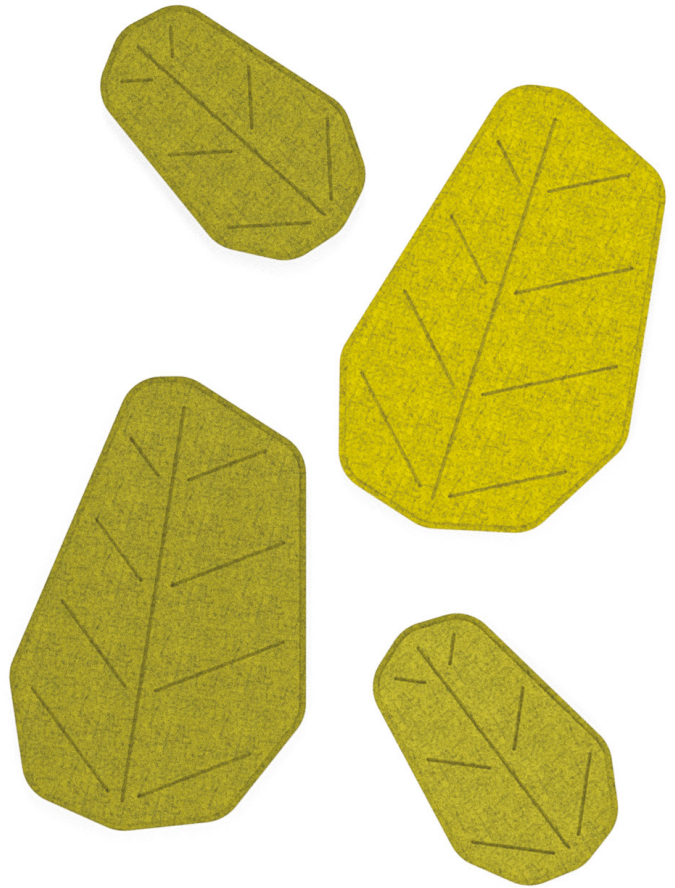

With three sizes in two different shapes, the room dividers stand for design and functionality. The three types of foot mount include one small leaf, one medium or large leaf, and a combination of two medium or large leaves alongside one small leaf.

LEAVES WALL

Behind the panel is where the magic happens - it is surprisingly easy to hang at any angle using the pre-mounted clips. And when attached to a transparent wall with suction cups, both sides of the leaf will be fully visible - imagine a greyish reception area on one side, and a vibrant yellow conference room on the other!

Should the architect choose to attach the panel to the ceiling - for an even greater acoustic effectiveness - a version is available with a wider, 3 cm edge.

MIDDLE LAYER COLOUR

Leaves lets you choose the colour of each of the three layers of its upholstery.

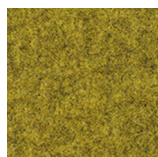

And thanks to the Acustio's signature solution, now even the hue of the inside layer can be selected. A myriad combinations can be achieved that will perfectly reflect the Client's branding and the emotions that it embodies.
