

## Setu™ Chairs

**Setu™ is now.**

Designed for where you want to sit,  
Setu gives instant comfort in all  
applications. Comfortable, adaptable  
and simple.

**The only chair with  
a Kinematic Spine.™**

The core of Setu is the Kinematic Spine, a combination of two simple polypropylene materials that are precisely engineered to achieve instant comfort. You are fully supported the moment you sit down, and the spine bends and flexes to your every move. With no tilt mechanism and only one adjustment (height), chair components are minimised.

# 7.5

The Setu chair is designed in partnership with Herman Miller by Studio 7.5 from Berlin, Germany. The same team responsible for the ground-breaking ergonomic chair, Mirra.

“Beauty is not only what you see,  
it’s also what you feel.”

Studio 7.5

For how we work now.

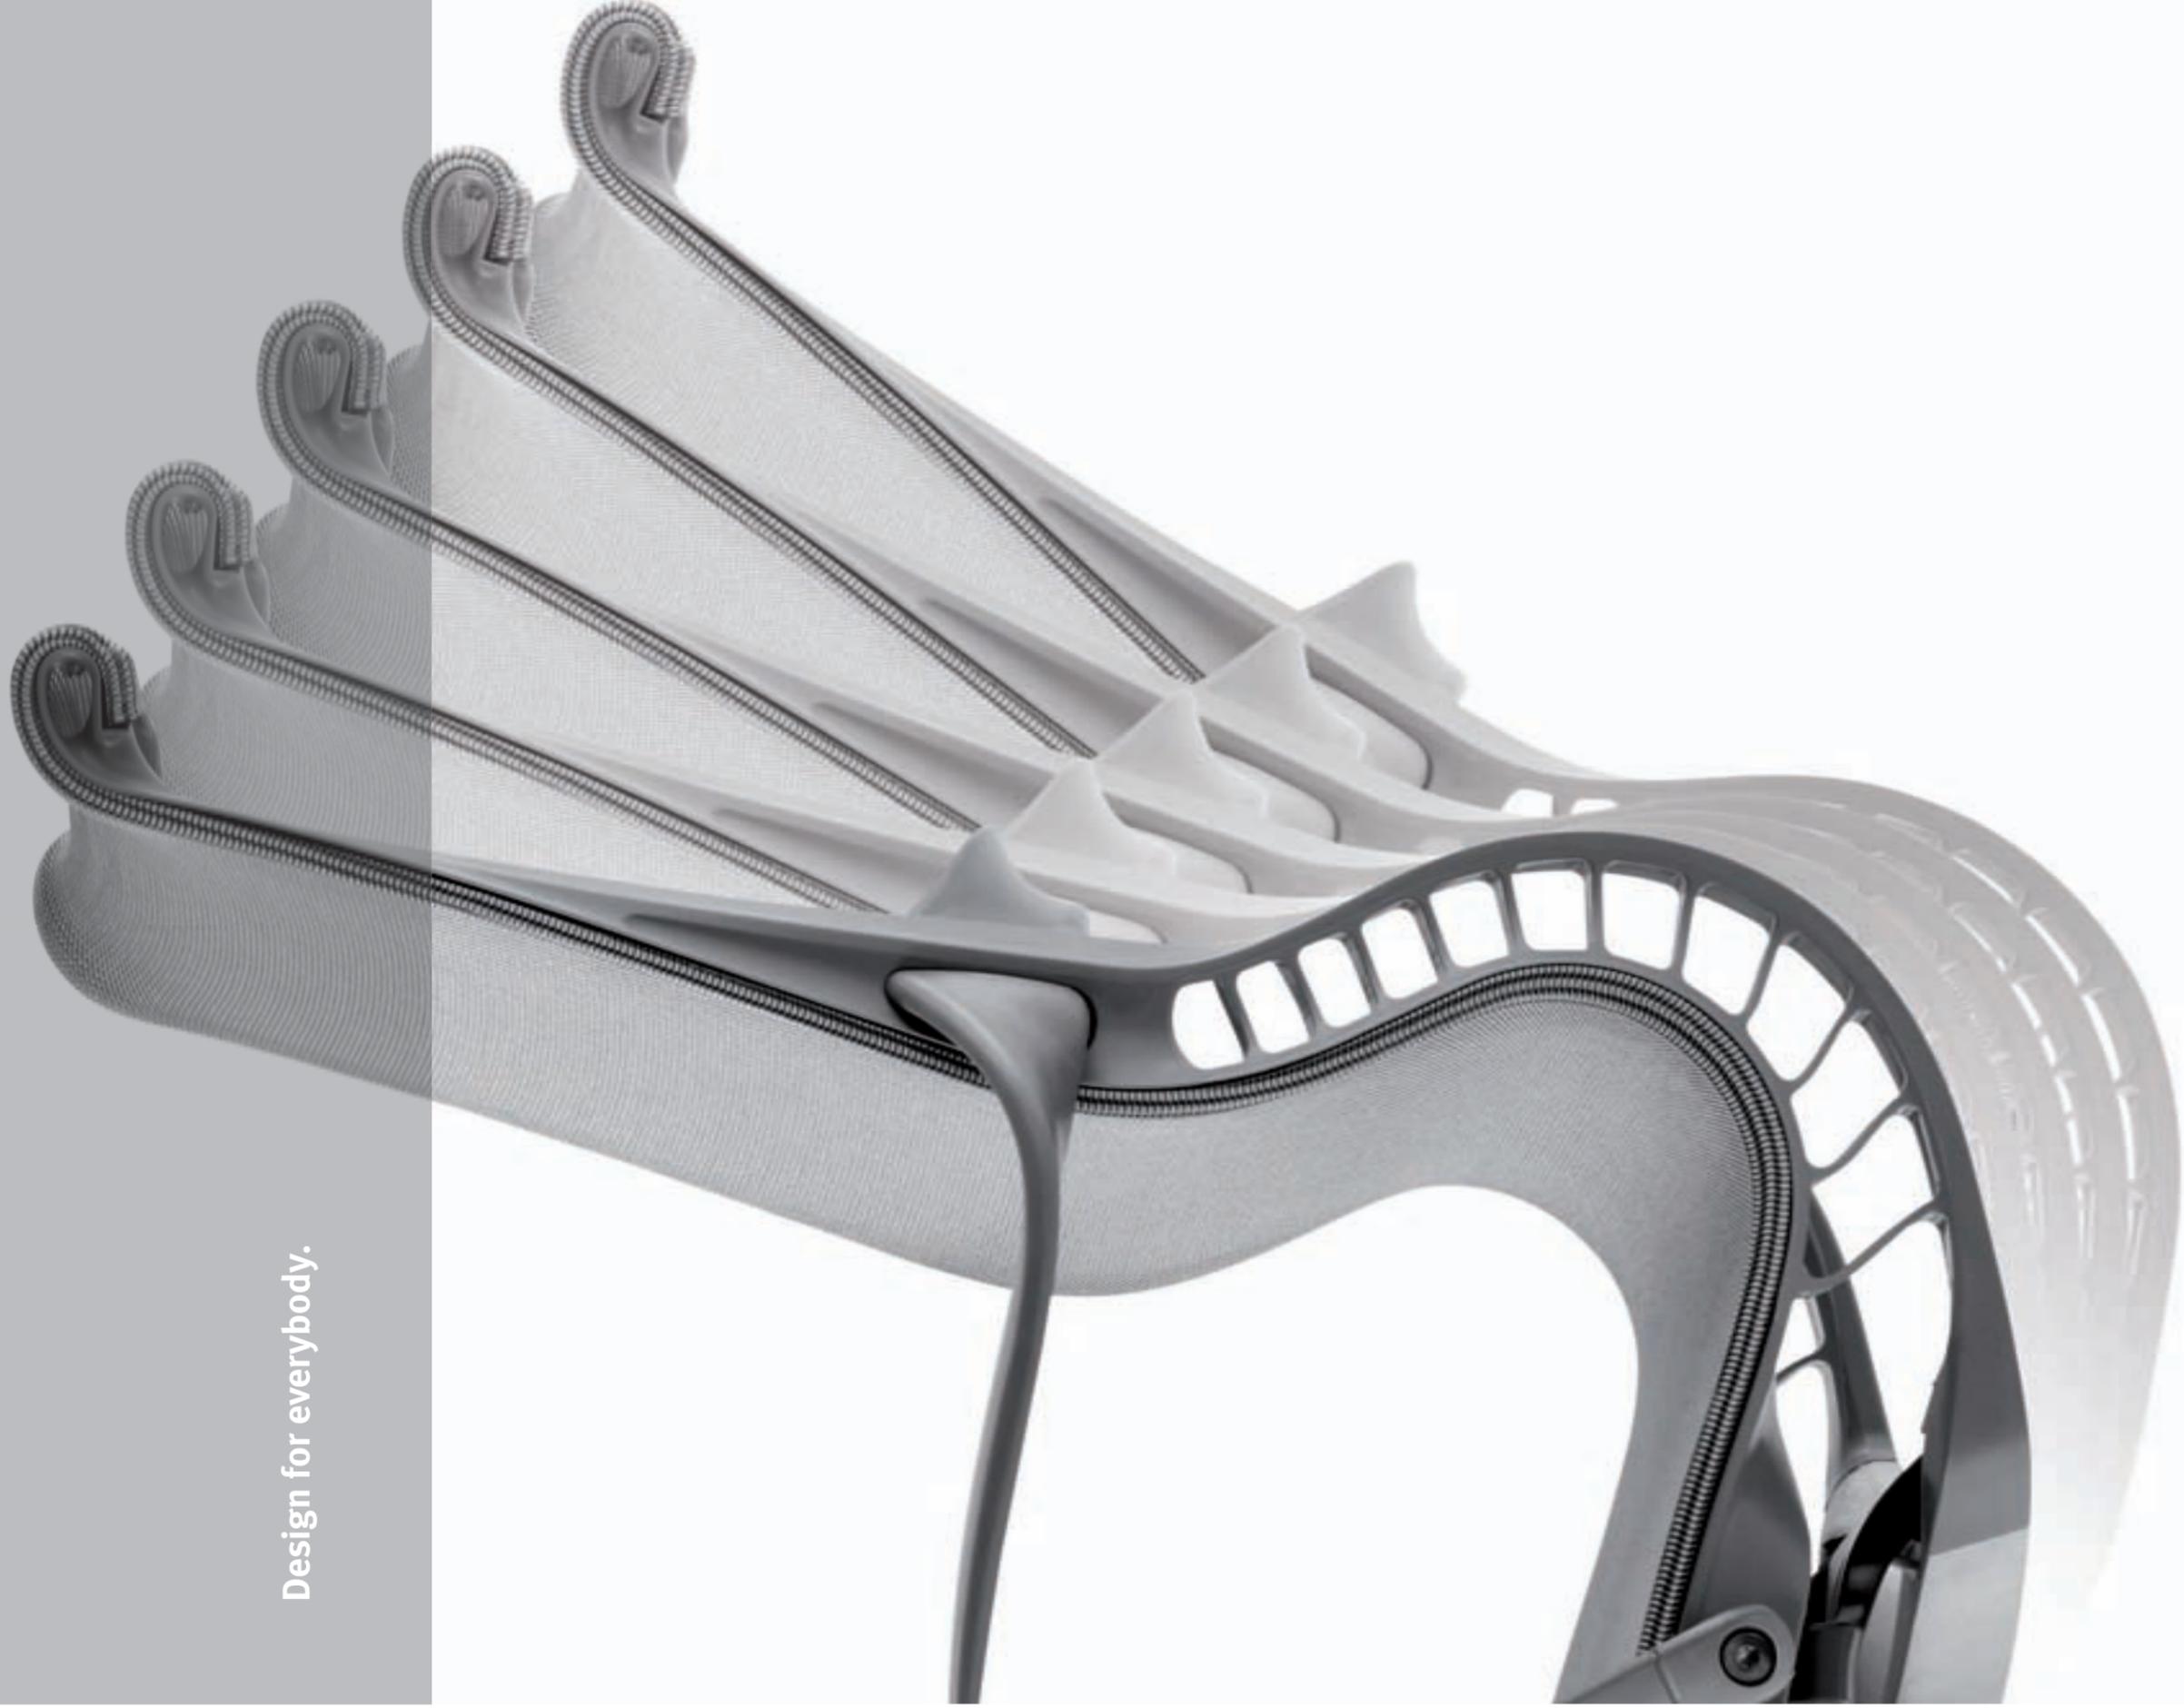

The Setu offering currently includes a 5-star, 4-star, and lounge and ottoman. Setu is designed for where you want to sit, from touch down spots, collaboration areas to meeting spaces.

Supporting the team.

Design for everybody.

Team spirited. Individually focused.

Simplicity and comfort at work.

Break out and be creative.

At home in the office. The office at home.

## Design for the environment.

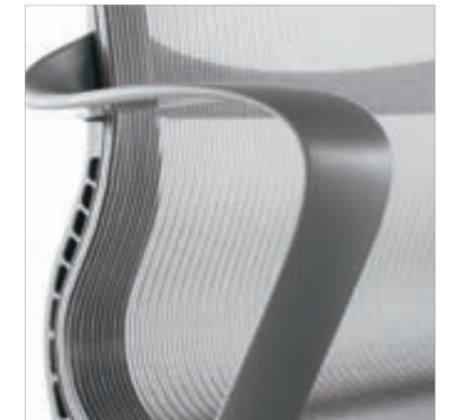

Setu contains only the materials needed and not a molecule more. Less chair means less time, cost and energy needed to build it. Setu is McDonough Braungart Design Chemistry (MBDC) Silver Cradle to Cradle certified, ensuring that it is made of safe materials and recycled content. Setu is also GREENGUARD certified.

## Materials Innovation.

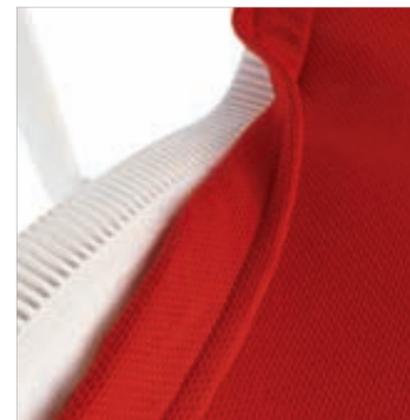

### Kinematic Spine

The polypropylene spine is a combination of two bendable composite pieces connected by “spokes.” The spine accounts for the sitter’s weight, providing the correct tilt tension without any mechanisms or adjustments.

### Ribbon Arm

Strong and supportive, Setu’s simple, one-piece arm curves gracefully around the back.

### Kinematic Edge, C-Layer Suspension

The Kinematic Edge and C-Layer suspension are unique to the Setu upholstered chair, connecting with the Kinematic Spine to provide a similar level of comfort and support to Lyris. C-Layer suspension colour match the selected frame.

### Lyris Suspension

Lyris is a finely tuned elastomeric material designed to provide superior suspension as well as aeration and temperature control. It works with the Kinematic Spine to distribute your weight evenly and conform to your contours.

### H-Alloy™

The H-Alloy aluminium base is durable and anti-corrosive.

Design for you.

## Colours, materials and finishes.

Honesty and innovation in materials are the foundations of design at Herman Miller, and they are hallmarks of Setu. Every detail is driven by function. From the composite Kinematic Spine, to the elastomer seat-suspension, to the H-Alloy aluminium base that requires no finish, Setu provides comfort and durability in an elegant design.
